DIGITAL TALENT MANAGEMENT PLATFORM

MANIKANDAN G **UI/UX DESINGER**

1. THE PROBLEM:

Organizations frequently struggle to manage employee performance, skills, and attendance due to fragmented or manual tracking systems.

The concept of Talent Management was first introduced in 1997 and has since evolved into the digital platforms we rely on today. A Digital Talent Management System is highly effective for maintaining accurate employee records and easily generating performance reports. Today, countless organizations use industry-leading talent management software, such as Zoho, SAP, and Workday.

1) **How Does One DTMS Work for All Organizations?**

How can a single system work for so many different types of companies? The answer lies in **customization, modularity, and scalability**. A DTMS is not a rigid piece of software; it is a flexible framework that a company can mold to fit its specific workplace culture and operational needs.

2) **The Solution: Digital Talent Management System (DTMS)**

The DTMS solves these industry challenges by providing:

- **Centralized Automation:** Streamlining manual HR tasks into one digital platform.
- **Role-Based Dashboards:** Providing tailored views and access levels for HR, managers, and employees.
- **Real-Time Analytics:** Generating instant data insights and organizational reports.
- **Skill & Growth Tracking:** Monitoring and guiding employee career development.

2. DEFINE TARGET USERS

Target users are the specific groups of people who will interact directly with the Digital Talent Management System (DTMS) to perform their daily tasks.

1. HR Managers (Primary Admin Users)
2. Team Leaders / Managers (Supervisory Users)
3. Employees (End Users)
4. Recruiters (Specialized Users)

3. CREATE DETAILED USER PERSONAS

1. HR / Resource Manager (Admin Level)

- **Role:** Matches employees to the right projects while balancing workloads to prevent burnout.
- **Main Focus:** Manages project assignments, unassigned staff (the "bench"), and overall company performance.
- **Daily Task:** Evaluates resource requests and allocates available, skilled employees to the right projects.
- **Weekly Task:** Monitors everyone's workload to ensure work is distributed fairly.
- **Project-End Task 1:** Collects performance feedback as soon as a project finishes.
- **Project-End Task 2:** Identifies missing skills to organize necessary training for the team.

2. Team Leader / Project Manager (Supervisory Level)

- **Role:** Guides the team to deliver client projects on time while managing daily developer output.
- **Main Focus:** Manages project execution, daily task progress, and overall team performance.
- **Daily Task:** Monitors daily coding output and requests new skilled workers from HR if a project needs help.
- **Weekly Task:** Logs weekly sprint feedback, approves timesheets, and helps clear technical roadblocks.
- **Project-End Task:** Submits formal performance scores for each team member based on their project work (e.g., code quality, speed).

3. Employee / Worker (End User Level)

- **Role:** Executes project tasks efficiently while learning new skills to grow in their career.
- **Main Focus:** Completes project assignments, tracks personal performance, and focuses on continuous upskilling.
- **Daily Task:** Works on assigned coding tasks, updates project progress, and logs daily billing hours.
- **Weekly Task:** Checks manager feedback, communicates any roadblocks, and monitors personal performance scores.

- **Bench Task (When unassigned):** Enrolls in recommended training courses to upgrade technical skills until the next project.
